THE STRONGEST LINEUP OF MIXERS

TO BUILD YOUR BUSINESS AROUND

THE KEY COMPONENT TO SUCCESS

Concrete products companies know that a high-performing mixer is key to success. Mixer Systems gives you not one, but four such machines to mix a wide variety of materials. Whether you're building from the ground up or looking to upgrade or improve your operations, center your plans on one of Mixer Systems legendary machines.

MIXERS, BATCH PLANTS, MATERIAL HANDLING AND MORE

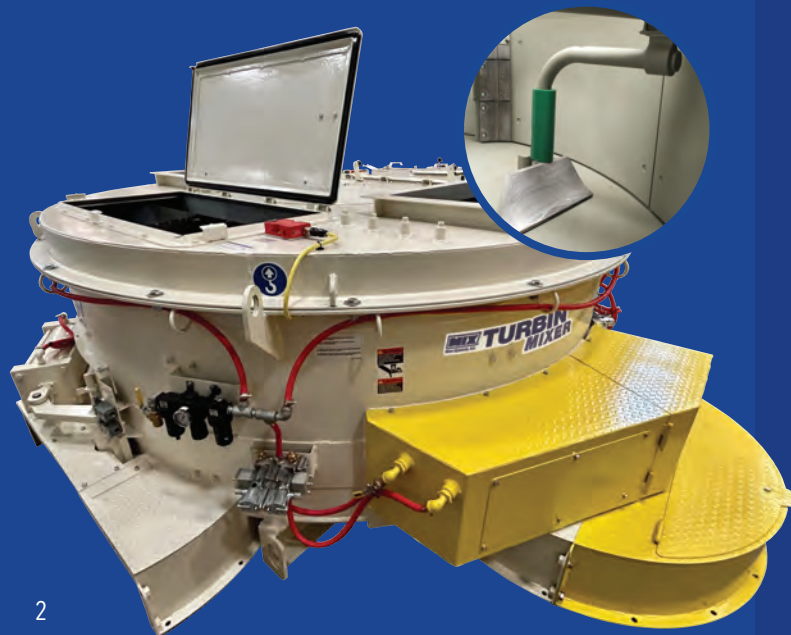

The most complete line of mixers in the industry is just the beginning. From customized controls, to material handling equipment, to batch plants in a full range of capacities, we equip you for productivity, reliability and safety. Just as we have since 1979, with American-made quality every step of the way.

Whatever your material, volume, or speed, we will manufacture a mixer to meet your specifications exactly.

TURBIN MIXERS

The industry standard for more than 100 years and the mixer that launched Mixer Systems. Made with pride by Mixer Systems, the Turbin is the most economical producer of a high-quality mix and ideal for dry bagging operations.

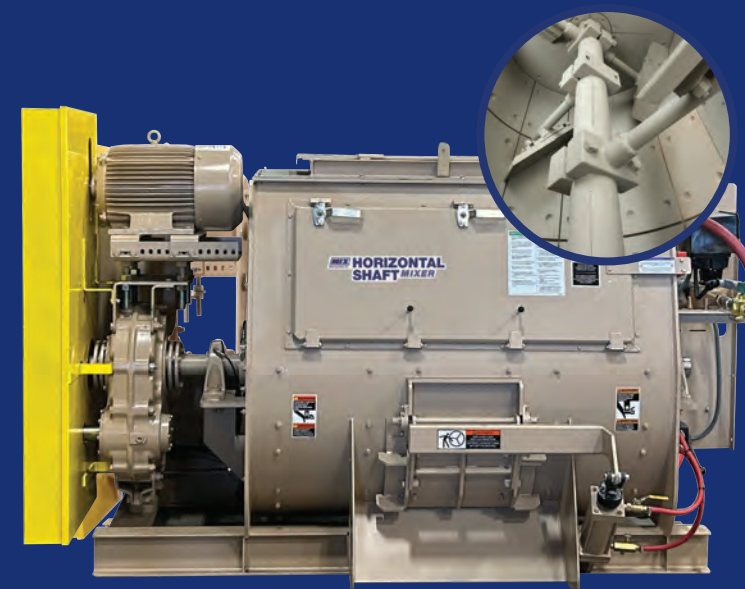

PLANETARY MIXERS

Planetary Mixers are the only ones of their type designed and manufactured in America. A unique "counter-current" mixing action results in a fast, homogeneous mix in as little as 30 seconds.

HORIZONTAL SHAFT MIXERS

The first choice of heavy-duty producers Horizontal Shaft mixers are recognized for their quality output and durable long-life operation. The industry choice for ultra-high performance concrete (UHPC).

TWIN SHAFT MIXERS

Designed with off-the-shelf components for ease of service and maintenance, including standard air purge shaft seals and single drive motor. The high volume, high shear mixing action gives you faster mixing times.

MATCH YOUR NEEDS WITH THE RIGHT BATCH PLANT SIZE

Every batch plant from Mixer Systems is custom designed, manufactured and installed to meet your exact specifications for capacity and performance. Choose one of four different mixers to handle your production requirements for consistently high quality wet or dry mixes. Add silos, hoppers and other components from a single source.

SKID MOUNT BATCH PLANT

The ideal design for starting a business or expanding to a new location. Accommodating a wide variety of mixers and control options, it can economically tackle production rates from just a few yards of concrete per hour to projects requiring 60 yards per hour. Set-up time from delivery to production is as little as three days. Flexible and affordable, the Skid Mount Batch Plant will keep your productivity on the move.

ECONOBATCH PLANT

You produce medium volume concrete batches, but still want a high-performing plant. Look no further than EconoBatch. It can handle up to six aggregates and two cements, and produce consistently high quality wet or dry mixes. Flexible design means it can be built to your specifications and expanded as you grow. And its economical cost enables you to become profitable quickly. No other plant in its class meets your needs so fully.

BATCHMASTER BATCH PLANT

If you're a high-volume concrete products producer, you depend on your batch plant to set the pace. Only one measures up: BatchMaster. Our top-of-the-line plant, it is capable of producing over 250 yards per hour. Configure BatchMaster to your exact specifications, beginning with our American-made mixers. Behind every BatchMaster is more than 45 years of company experience in batch plant design, manufacturing and construction. No matter what the production challenge, BatchMaster takes charge.

THE HIGH-PERFORMANCE STANDARD IN PRODUCTION COMPONENTS

A mixer may be the hub of your operation, but we haven't forgotten the other pieces that contribute to your productivity. Count on Mixer Systems as your single source for material handling components to move materials safely and efficiently around the plant, and accessories that add function and convenience to your mixing operations. They're all made at our headquarters with the same attention to quality, durability and performance that keeps our mixers at the top of your list.

Ask us to design a whole-plant solution built around our mixers, accessory systems and material handling equipment.

MATERIAL HANDLING EQUIPMENT

Transport and lift bulk materials to improve workflow; maximize storage throughout the plant.

TRANSPORTING AND STORAGE

Our material handling components integrate smoothly with any plant environment. Keep your production line moving at a profitable pace with conveyor belts, weigh batchers, aggregate bins, cement silos, and cement screw conveyors.

SKIP HOIST

Compact, space-saving skip hoists provide fast, dependable lifting for all material handling operations. Low-profile or bottom dump designs fit into tight work areas. Heavy-duty construction assures long life and stability on the oversized frame and track.

ACCESSORIES

Add to the capabilities of your mixers while improving safety and quality with optional systems.

AG-FLOW AGGREGATE HEATING SYSTEM

Control variables such as temperature and moisture content to ensure the quality of your finished product. The Ag-flow System forces water from the material during wet weather, and in the winter it acts to thaw/heat frozen material for use. Easy to install in new or existing plants and can handle up to eight separate aggregate bins.

AUTOMATIC WASHOUT SYSTEM

Cleaning the build-up inside of mixers is the least favorite job. But it's necessary to produce quality mixes and prevent premature component wear. Now it can be done easily and safely from outside the machine. The Automatic Washout System can be fitted to any new or existing mixer.

CONTROLS:
DESIGNED, PROGRAMMED, WIRED
AND TESTED AT THE SOURCE.

Concrete batch plant controls from Mixer Systems allow you to take advantage of process automation on a scalable basis. Add the level of automation that precisely meets your requirements. The engineers at Mixer Systems will work with you to design the right system for your plant. We build and test all of our controls and starter panels here in our facility, before shipping, to ensure performance when installed on site.

MIXER SYSTEMS
OFFERS YOU COMPLETE
FACTORY-SOURCED
BATCH CONTROLS
THAT INCLUDE ALL
TRAINING AND SERVICE.

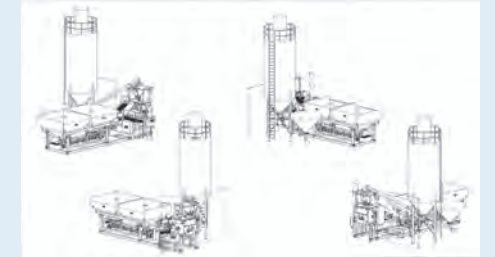

Trust the company that builds your equipment to build and program your controls, too.

IN-HOUSE ENGINEERING:
A MATTER
OF PRECISION.

High performing, durable equipment begins with precise engineering, and it all starts with the Engineering Department at Mixer Systems. Working closely with customers, our engineers develop advanced products to meet the ever-changing needs of the industry. Each product is built to your specifications, using the most advanced 3D programs.

Your batch plant is conceived with 3D modeling to ensure proper equipment layout, tolerances, and assembly.

Our engineers create customer general arrangement drawings, showing the batch plant, foundation loadings and specifications.

MANUFACTURING:
WELDING, ASSEMBLY,
PAINING, AND
TESTING
UNDER ONE
ROOF.

We build, run and test all of our mixers for proper fit and tolerances in our shop. Our bin assemblies and weigh batchers are factory wired and plumbed with air lines for ease of field installation. Platforms and structures are factory assembled for proper fit, and then disassembled as needed for shipping. All equipment is primed and finish painted at our facility.

Batch plant components are all shop assembled for proper fit before final painting and shipping.

Assembled sub-assemblies, pre-wired and installed air lines make field installation easy and more convenient for our customers.

TESTING:
YOUR MATERIALS,
YOUR PRODUCTS,
OUR FACILITY.

Customers are encouraged to come to Mixer Systems to complete testing of their own materials with our trained engineers and shop personnel. Customers may also send their materials in for testing by Mixer System experts with results reported and samples returned promptly.

We mix and test customer materials to ensure product quality and cycle times.

Tests are performed on three different types of mixers to determine which is best.

INSTALLATION AND TRAINING: DIRECT FROM THE FACTORY.

Don't leave the critical step of installation to inexperienced contractors. You won't find anyone more knowledgeable about Mixer Systems equipment than our Plant Services & Installation Division experts. When you utilize our services, you gain the advantage of single-source responsibility for everything from installation and start-up to emergency service. Proper installation and operator training can speed your start-up time and reduce operating costs.

Trust the craftsmen who built your equipment to install it with the same expertise.

Only Mixer Systems offers you factory-sourced installation, training, and service

PARTS AND SERVICE: WE DELIVER.

The sale may be done, but we're not done serving you. We maintain a multi-million dollar parts inventory at our plant. Most can be crated and shipped within 24 hours to help keep your production up and running. Our service people are known within the industry as the experts, offering you years of experience. If there's a problem or a question, you can go directly to the source at Mixer Systems, in many cases talking with the very people who built your equipment.

A vast in-house inventory of parts keeps your company productive.

Most parts orders are shipped within 24 hours.

MADE IN THE USA FOR YOUR WORLD

Mixer Systems has been manufacturing equipment for the concrete products and related industries since 1979. Today, our systems are at work in countries around the world. An 86,000 square-foot facility houses advanced product planning, state-of-the-art manufacturing, and the capability of designing and constructing concrete batch plants from the ground up. Our product line is the largest in the industry, built with American reliability and pride to stand up to the challenges of your world.
